

## Rosettes suitable for antique helmets and armor.

This type of rosettes are very suitable for several models of helmets because the resemblance is great.

Centurio helmet from Sisak-Croatia, Galic B from Klakar, Gallic F Besançon, Vindonissamuseum in Brugg, LWL-Römermuseum Haltern and some Weisenau type of helmet.

My rosettes model used for improvement of the project Centurio helmet from Sisak, Croatia helmet is tinned and then silver plated.

To obtain a good result on improving (I hope that I've achieved it) I have to improve and change rosettes. I created them as I tried to be as close to the originals. I made steel mold with the appropriate shape and then was hammered from brass sheet (as in antiquity).

Matrix form necessary for forging them.  
Cleaned and polished. Ready for assembly.

The resemblance which I achieved on this concentric rosette is very good.
