

Bonn -Landesmuseum Reingonheim cingulum and the similar one to it from Cortesia Museum.

This is one of the most beautiful models of Roman cingulum Belt. Wonderful work of Roman military arts. Very inspiring model

My reconstruction of buckle and plate. From the original photo can be seen that there are a relief lines on the tongue of the buckle:

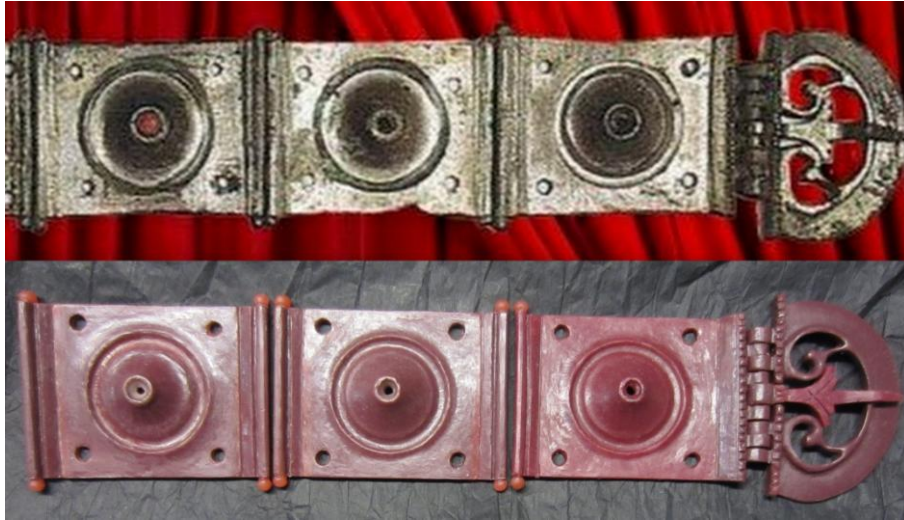

Dimensions of the buckle is:Width (without hinges) -33 mm.Height- 50 mm .

Plate thickness 1,5 mm.

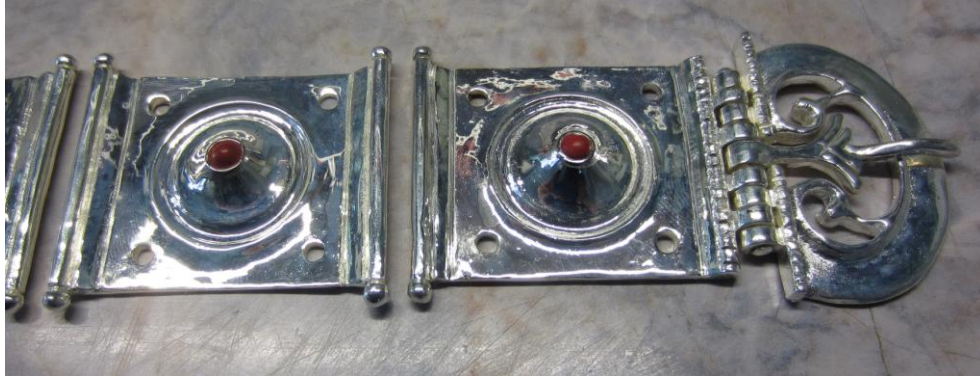

Dimensions of the plate is length-55 mm. height (without the balls)-40 mm.

The peak of the plate is hollow from inside to reduce weight.

The pictures of the originals are not very clear but I have made these buckles tongue in the most proper way.

To reach this level of similarity ,I did and throw on the trash 5 or 6 rubber molds. On this project I worked over 8 months.

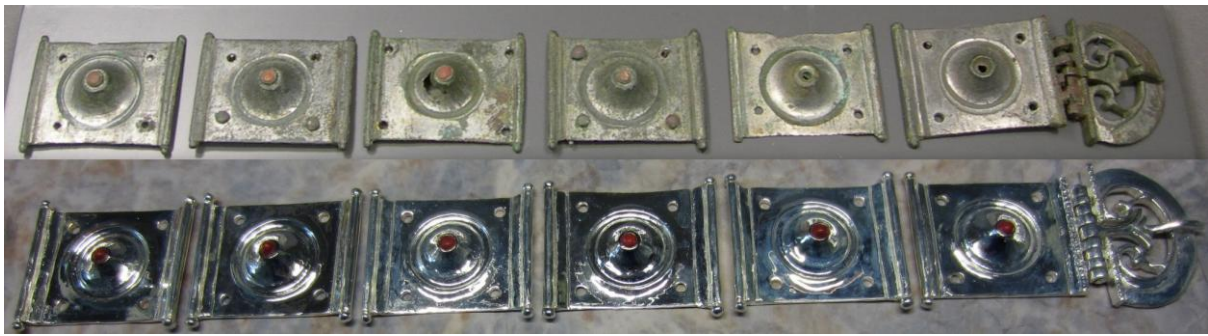

Two version (silver plated and tinned) . I put a red enamel -paste on the peak.

This is the silverplated version ,the best option as the color and quality.

This is the tinned option.

The Silverplated version is the best option as the color and quality. Everything is ready and prepared for mounting on leather belt.

This is a finished prototype for the development of which I have tried very much. Belt is made of double sewn leather.
