

Lorica hamata lock-hooks

My replica of lorica hamata lock-hooks.

Mainz and Nijmegen museum, Vindunissa hamata hangers, Lunt Roman fort models.

Lorica hamata lock-hooks Mainz model

Der Legionär unter Caligula, Claudius und Nero

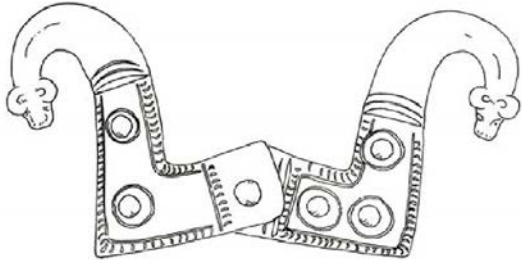

Abb. 17
Verschlusshaken für ein Kettenhemd nach Funden aus Nijmegen und Mainz mit stilisierten Widderköpfen sowie dekorativen Kugelkopfnieten.

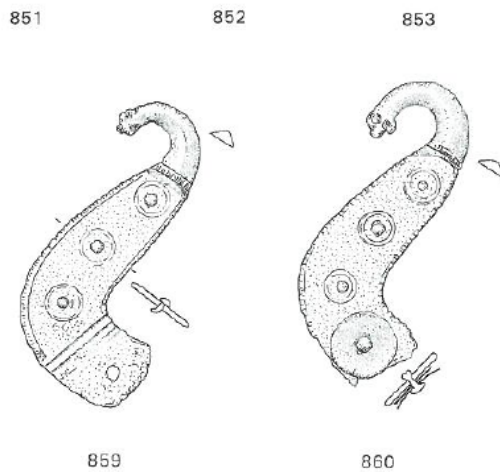

Vindunissa hamata hangers

There are not many publications and photos o show details and quality images on the subject Vindunissa hamata hangers. But I tried to make a decent replica on the subject for the needs of the correct historical reenactment.

This is complete Vindunissa hamata hangers silver-plated version.

The museum originals apparently have a silver or tin coating surface.

These are described in the: Katalog_der_Militaria_aus_Vindonissa_Mil № 895 and № 860.

The brass model.

My wax model. The hangers have a specific relief that I must take into account in order to be able to use them practically.

Lorica hamata lock-hooks Lunt Roman Fort model

British archeology project

A find from Roman Britain of ram's head hamta hangers. They are suitable for all us reenactors from all over the Roman limis. Because they were most likely produced in antiquity some where along the limes of the Rhine and Danube or in some castrum

vicus. This method of fastening with a curved neck of the hanger is rare as a construction solution.

The disks together with the washers that serve to lock the hamata hangers must be made wide because these hangers have a high relief. If this is not foreseen on wax then on metal it will be too late to correct and simply the hangers will not lock on the full way and well, they will come off very easily in action.

My wax project.

In action.
