

XIPHOS swords

We add new three XIPHOS swords to our Archaic period re-enacting collection.

We prefer one site decoration to prevent the wrong site of the blade put in the scabbard, and we used new model of buckles to fasten the scabbards. This new models of Archaic (bow shape) buckle will give us the possibility to fasten the xiphos sword under the armpit as it should be.

We decided to follow this decoration scheme, which images of Archaic hoplite are coming from the respective historian period.
